## **DETAILED ACTION**

### ***Response to Amendment***

1. Applicant's amendment of the claims has been fully considered and is entered.

### ***Response to Arguments***

2. Applicant's arguments filed 28 May 2004 have been fully considered but they are not persuasive. In response to Applicant's request for explanation of the rejections of limitations previously indicated as allowable, it was found after further analysis of the Micali reference that the concatenation in Micali is arbitrary with no distinct pattern (Col. 6, 33-40 & Fig. 2). Further, Applicant's assertion that indicated allowable subject matter (claims 20, 22) from the Final Office Action dated 4/5/04 is found in the rejected claim 1, is correct and claims 20, 22 stand rejected along with claim 1 for the same reasoning stated in paragraph 3 of the Final Office Action date 4/5/04.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-3, 5-10, 12, 14-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Micali, U.S. Patent No. 4,944,009. Referring to claims 21, 23, Micali discloses a pseudo random sequence generator wherein random sequences are generated for encryption purposes (Abstract) by generating, via parallel processors (synchronizing

based on clock), several pseudo random sequences (pseudo noise sequences) that are subsequently concatenated (Col. 6, lines 33-39), which meets the limitation of synchronizing the augmented sequence to a reference clock. Figure 3 shows 4 random sequence generators, which meets the limitation of generated two or more pseudo random noise sequence generators.
